I've spent the last 2+ years doing manual testing and quality assurance on a POS platform, a financial technology (fintech) system handling invoices, payments, and transaction reports, the kind of flows where a wrong value isn't just a UI bug. Two years as the sole QA owner across four applications (POS, KIOSK, STOCK, OFFICE) sharpened my software testing instincts, from test case design and execution to reproducing what a spec doesn't say clearly enough to act on. On the automation side, I self-learned Playwright, integrated key flows into GitHub Actions CI/CD pipelines, and use AI tools like Claude for test case generation, bug analysis, and automation code writing.

PROFESSIONAL EXPERIENCE

Resonian Inc. · Remote July 2024 – Present
Software QA Engineer California, USA

CONTRIBUTIONS

- **Exploratory testing:** Designed and ran unscripted sessions on high-risk transactional flows (invoices, payments, VAT/tax), consistently surfacing edge cases scripted checks missed.
- **Pre-feature risk analysis:** Reviewed requirements and acceptance criteria with developers and product managers before development started to scope what needed testing and flag high-risk areas, preventing dozens of defects from ever entering the sprint.
- **Reported 1,000+ bugs:** Narrowed root cause before filing and wrote tight, reproducible steps with severity context, so developers could act without back-and-forth.
- **Tested Smart Invoice, an AI-powered invoice management feature:** Manually validated AI-extracted data and auto-categorization against real invoices on web and mobile, catching edge cases where the model misread or miscategorized line items.
- **Sole owner of platform quality:** Across 4 applications, POS, KIOSK, STOCK, and OFFICE, covering new features, regression, and every release end-to-end on web and mobile.
- **Maintenance:** Authored test suites, test cases, exploratory checklists, and internal system documentation; ran weekly smoke and regression passes before every production release.
- **Mentored 2 junior engineers** during onboarding, pairing on test design and bug triage.
- **Self-taught Playwright:** To automate repetitive regression checks on key web flows; integrated test runs into **GitHub Actions CI/CD pipelines** for continuous testing on every push for two critical menus.

SKILLS

Testing Types: Exploratory · Regression · Smoke · E2E · Integration · Functional · Usability · Sanity · Test Case Design & Execution

Platforms: Web (React SaaS, B2B) · Mobile (iOS & Android)

Methodology: Agile

Automation: Playwright · Jest · GitHub Actions · CI/CD pipelines

API Testing: Postman

Debugging Tools: Browser DevTools

Languages: TypeScript · Node.js · MySQL

AI Tools: Claude Code

EDUCATION

B.Sc in Computer Science and Engineering 2019 – 2024 | CGPA: 3.16 / 4.00
Shahjalal University of Science and Technology, Bangladesh
